

October is National Chiropractic Month! In honor of that, Wabash Chiropractic Center would like to offer a FREE scoliosis screening at our office! We are located at 508 N Wabash St. in Wabash on Wednesday, October 25th from 9:00 a.m. to 12:00 p.m. for students from grades 5 through 9 (ages 9-15). Early detection is essential to correcting/ making aware of scoliosis. Scoliosis can be detected as early as 9 years old. It can be acquired or hereditary and tends to accelerate through puberty. As a public service Wabash Chiropractic is striving to help and recognize early detection of scoliosis in our youth. We hope to see you on Wednesday, October 25th!
